# SELECTION OF OPTIMAL WASTE TREATMENT TECHNOLOGIES FOR UKRAINIAN CONDITIONS

Dipl.-Ing. Roman Maletz  
WATRA Project – Workshop UA  
Kharkiv  
22 June 2017

**Institute of Waste Management  
and Circular Economy**

# Content

Sanitary Landfill

MBT Technology

Recycling Technology

Waste Incineration

## WATRA PROJECT

The project “Waste management in transition economies” (WaTra) aims to

- (1) develop study and roadmap: “Reforming of the waste management in post-socialistic economies: case studies Eastern Germany, Ukraine and Belarus”
- (2) organise waste management workshops and trainings in Ukraine and Belarus
- (3) enhance further cooperation between partners through development of the joint project proposal

## Basic Requirement: Sanitary Landfill!

### “Low Tech”

- TOC  $\leq$  18 mass-%
- No gas collection
- Methane oxidation 50%

### “High Tech”

- landfill class II according to the German landfill ordinance
- multi-barrier concept
- TOC  $\leq$  18 mass-%
- Landfill gas collection
- CHP with 35% electrical efficiency power unit (net)
- CHP with 10% thermal efficiency power unit (net)

Structure of surface sealing system landfill class II

Landfill base lining class II

## MBT variations

**MBT**: Mechanical Biological Treatment

**MBS**: Mechanical Biological Stabilisation

**MPS**: Mechanical Physical Stabilisation

**Always combinationen of  
mechanical and biological / physical treatment**

**→ different aims and order**

## Low and High Tech - MBT

### “Low Tech”

Impurities 5 %

Metals 2 %

RDF 35 %

Degradation 18 %

Treated material to landfill 40 %

### “High Tech”

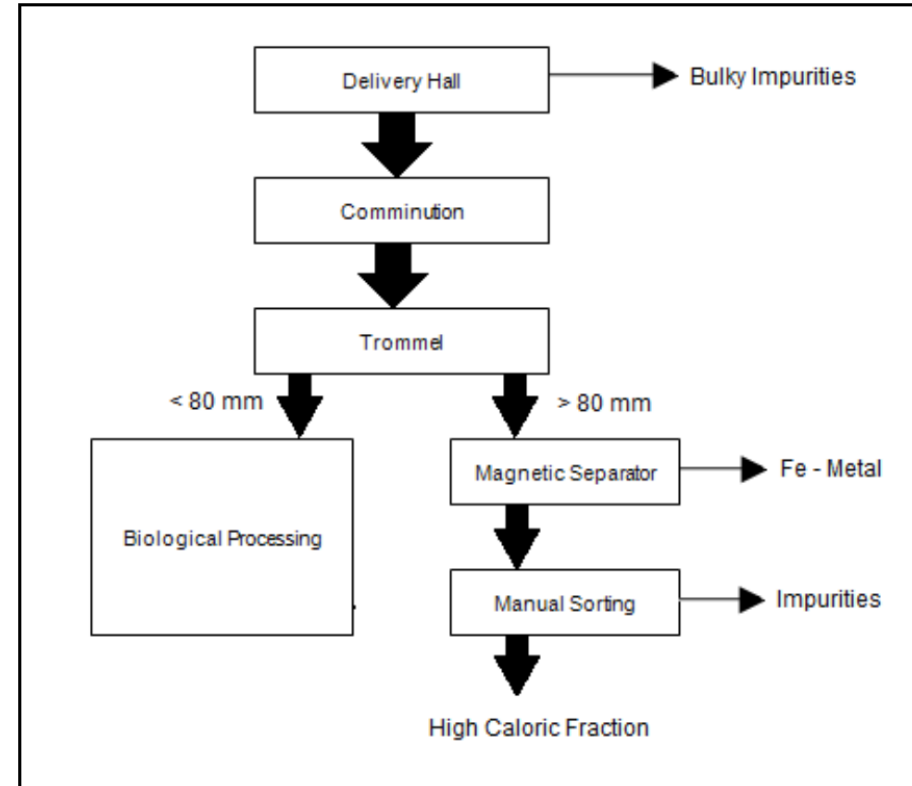

RDF 35 %

Biogas 7 %

Metals 2 %

Treated material to landfill 14 %

Waste water and degradation losses 42 %

Example „Low Tech“ MBT

## Investment costs for MBT (in Derhachi Region)

	Input [t/y]	Low Tech	on landfill site or ZUBR	High Tech
Derhachi	11,200 – 15,200	2.7 – 3.7 Mio €	0.22 – 0.3 Mio €	4.0 – 5.4 Mio €

## Basic terms: Composting vs. Rotting

# Composting (Biowaste)

Aerobic biological operation process to handle (separate collected) **biodegradable waste** to form a humus-like product, containing valuable nutrients

# Rotting (Residual waste)

Aerobic biological operation process to handle **household waste** (mixed with biological waste) to reduce volume, mass, biological activity

## Treatment steps

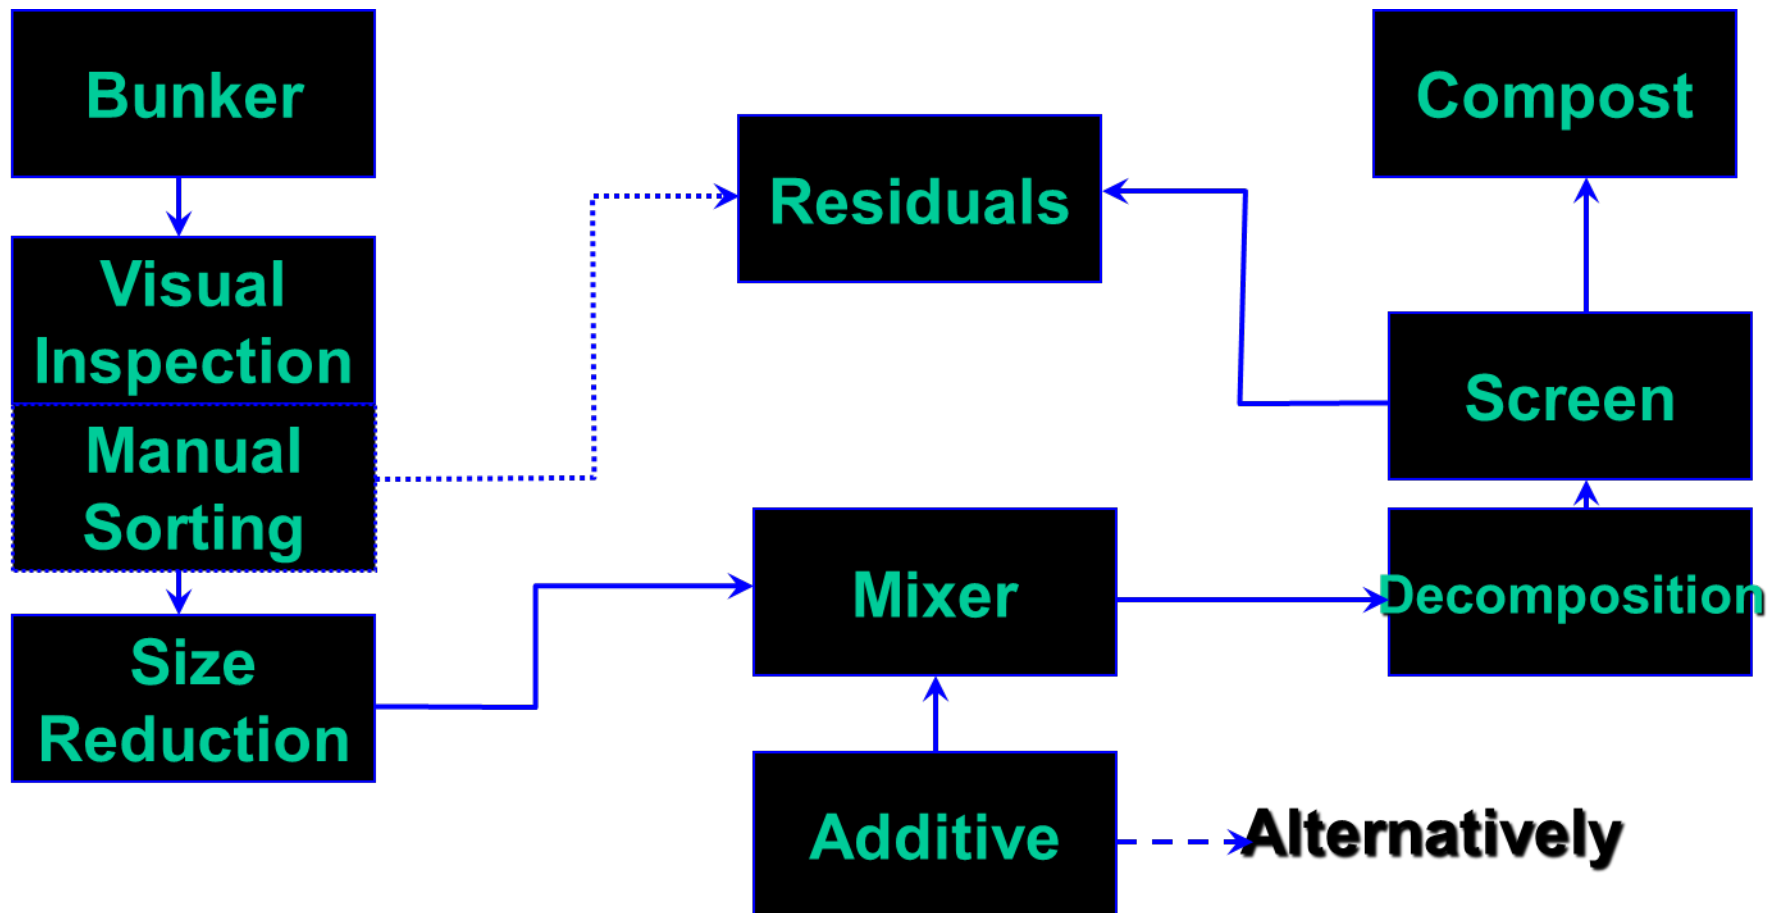

Size  
reduction  
Sieving

Triangular  
windrow  
composting

## Treatment steps – Basic process

Overview of collection systems in place in the 28 EU countries

Source Separation

Collection type	Paper	Glass	Plastic	Metal	Bio-waste
<b>Door-to-door (single fraction)</b> 	AT, BE, BG, CY, DE, DK, FI, HU, IT, LU, LV, NL, SI, UK	BG, FI, LU, LV, NL, SI, MT	AT, LV, NL, DK	FI, NL, DK	AT, BE, CZ, DE, FI, EE, IT, HU, LU, NL, SI, SE, IE, UK
<b>Co-mingled ...plastic + metal</b> 			BE, BG, CY, DE, FR, IT, HU, LU, SI		
...3 fractions	RO, MT: paper, plastic, metal UK: plastic, metal, glass				
...all in one bin	EL, IE: paper, glass, plastic, metal				
<b>Bring points</b> 	CZ, EE, ES, FR, HR, LT, PT, PL, SE, SK	AT, BE, DK, CY, CZ, DE, EE, ES, FR, HR, IT, HU, LT, PT, PL, RO, SE, SK	SE  ES, HR, LT, PT, PL (all plastic/metal in one container)	AT, EE, SE	ES
<b>Civic amenity sites</b> 	<b>Primary collection:</b> CZ (metal waste), SK (metal and bio-waste), LV (metal) <b>Addition collection of all waste streams:</b> all countries <b>PL:</b> rare distribution of civic amenity sites				

- AT Austria
- BE Belgium
- BG Bulgaria
- CY Cyprus
- CZ Czech Republic
- DE Germany
- DK Denmark
- EE Estonia
- ELGreece
- ES Spain
- FI Finland
- FR France
- HR Croatia
- HU Hungary
- IE Ireland
- IT Italy
- LT Lithuania
- LU Luxemburg
- LV Latvia
- MT Malta
- NL Netherlands
- PL Poland
- PT Portugal
- RO Romania
- SE Sweden
- SI Slovenia
- SK Slovakia
- UK United Kingdom

## Efficiency of different collection schemes (also dependend on other regional factors)

Survey of the 28 EU-memberstate capitals separate collection systems

Collection type	Paper	Glass	Plastic	Metal	Bio-waste
<b>Door-to-door (single fraction)</b> 	29 kg/cap Highest: 58	6 kg/cap Highest: 25	9 kg/cap Highest: 32	1 kg/cap Highest: 1	20 kg/cap Highest: 73
<b>Co-mingled plastic + metal</b> 	30 kg/cap Highest: 53	5 kg/cap Highest: 12	6 kg/cap Highest: 12	3 kg/cap Highest: 4	
<b>Bring points</b> 	12 kg/cap Highest: 76	12 kg/cap Highest: 53	7 kg/cap Highest: 26	2 kg/cap Highest: 9	19 kg/cap Highest: 33
<b>Civic amenity sites</b> 	3 kg/cap	2 kg/cap	1 kg/cap	2 kg/cap	6 kg/cap

# Separate Collection Door-to-Door

## 4 Bins system

established system  
in Germany

## 2 Bins system

## 3 Bins system

applied  
in other  
European  
countries

## Collection of Valuables? Quality!

Why often low quality recyclates?

In Germany recycling rates achieved by declaration of recovery at input of MRF → therefore facilities run on high throughput rather than generating high qualities (among other aspects)

Material separation by particle size  
(sieve classification)

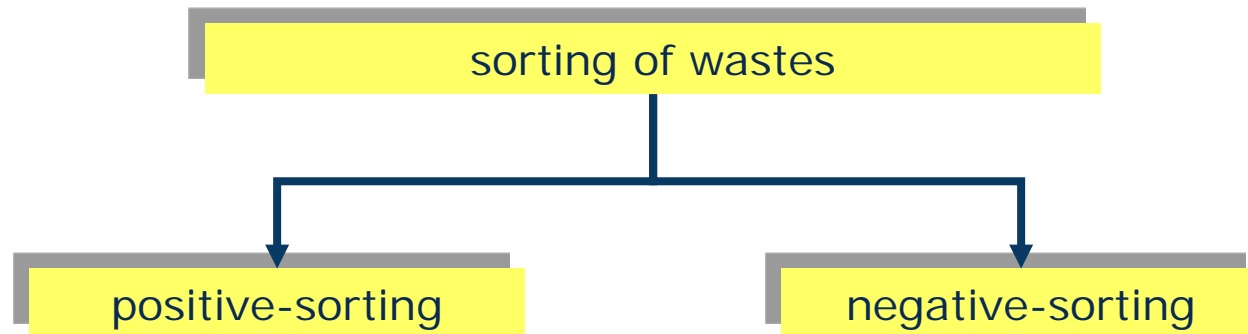

Subgroup is sifting  
(hydraulic classifying):  
Material separation in the fluid  
medium (use of Buoyancy / inertia  
and gravitational forces)

Separation by other properties than  
particle size:

Color, density, shape, transmission,  
conductivity, molecular structure,  
magnetism,...

The problem is often: heterogeneity und moisture of wastes

**SORTING:** Separation by other properties than particle size, evaluation of particles by material properties like: color, density, shape, transmission, conductivity, molecular structure, magnetism,...

Example:

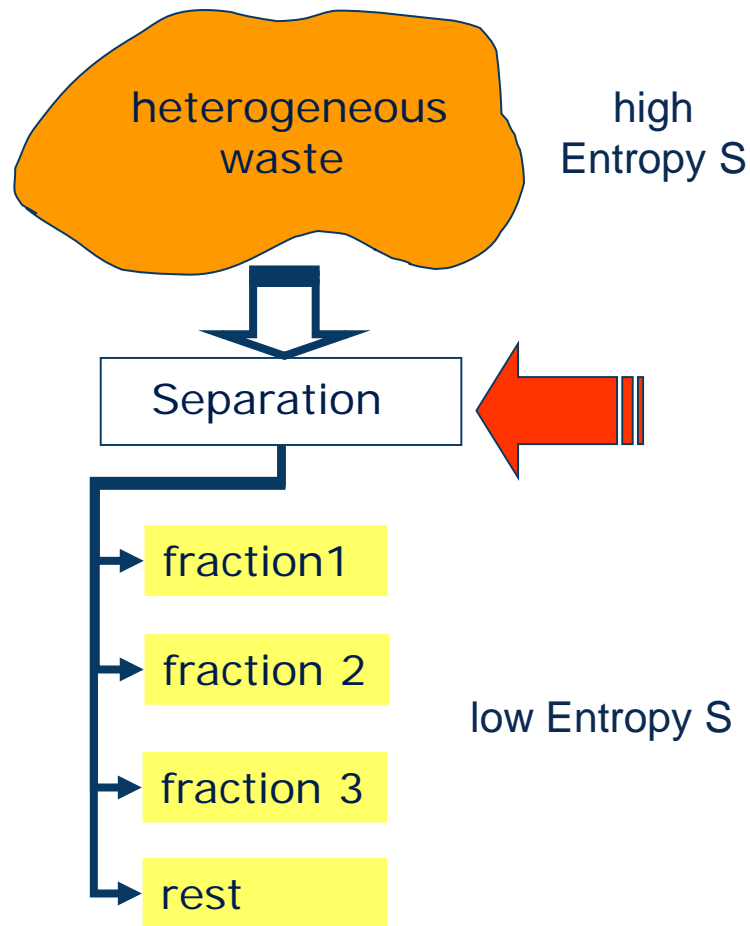

Sorting of PE-particles out of a light packaging flow

Example:

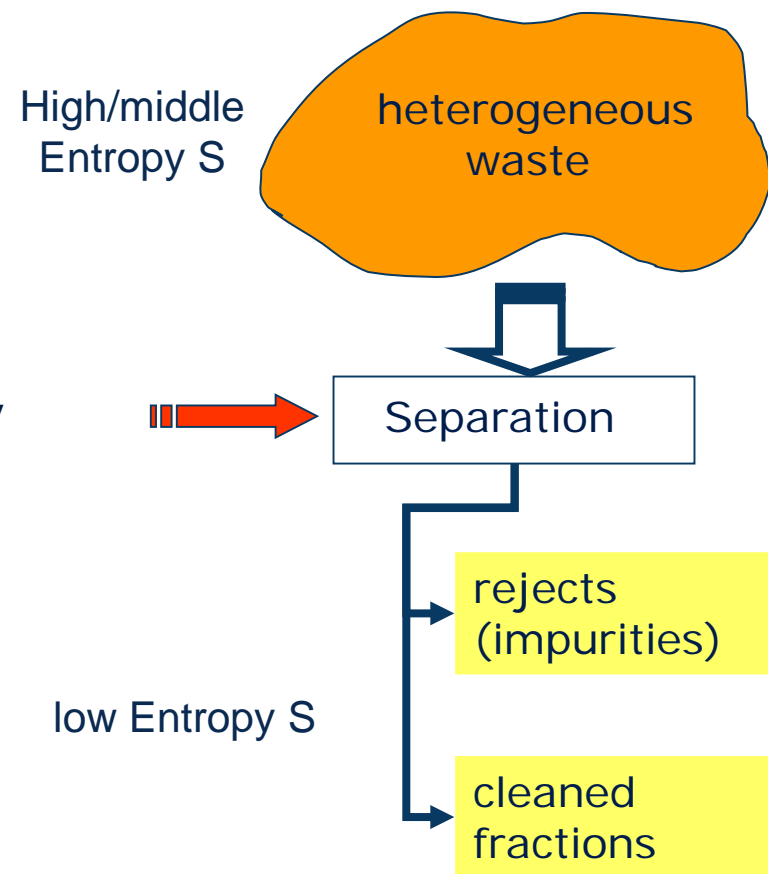

Removal of impurities out of a bio-waste flow

positive sorting:

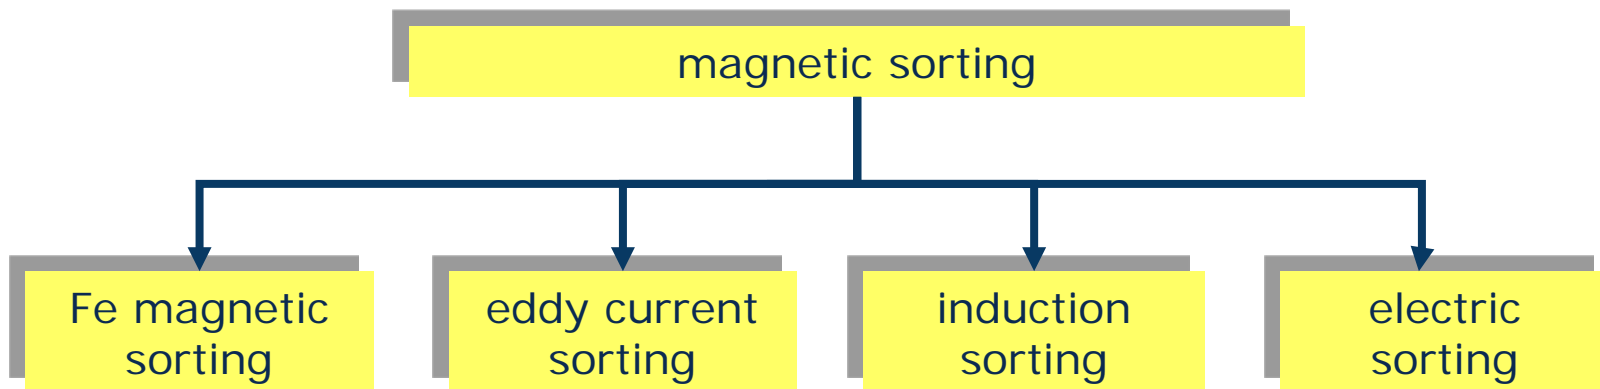

negative sorting:

magnetic sorting:

Is the separation of heterogeneous materials of magnetizable and non-magnetizable particles by the effect of magnetic forces.

The separation is based on the effect, that magnetizable materials are attracted by a magnet, whereas non-magnetizable materials produce no inherent magnetic moment.

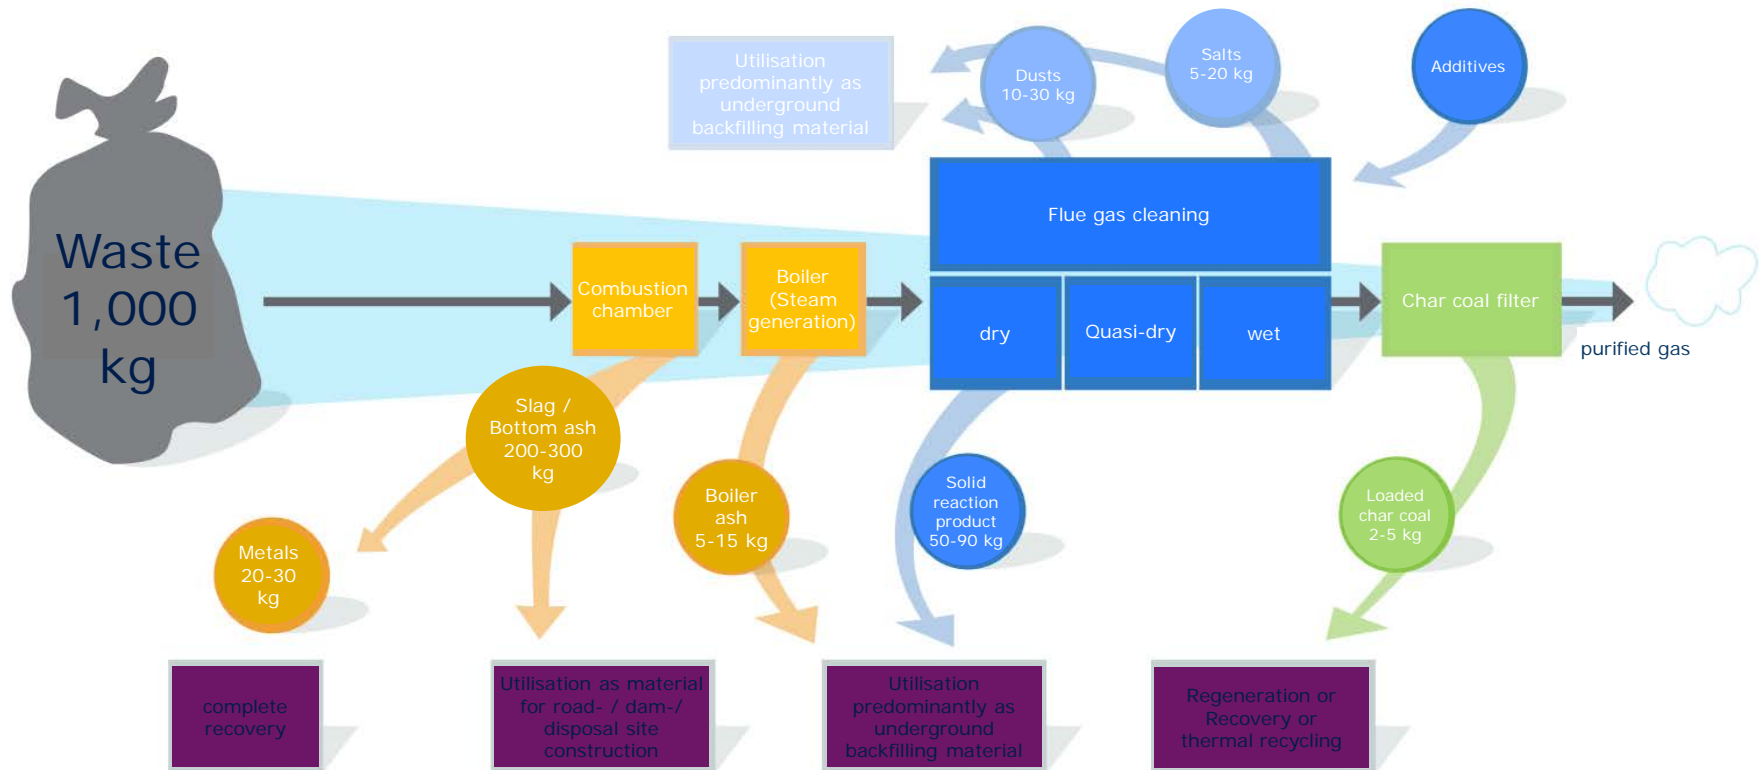

# Waste Incineration plant

## Kehrichtverwertungsanlage III Basel

1. Anlieferungshalle (Bahn / LKW)
2. Müll-Einschubeinheit
3. Sperrmüllschere
4. Müllbunker
5. Kranführerkabine
6. Müllkran
7. Kranrevisionsplatz
8. Beschickungstrichter
9. Sekundärluftsystem
10. Müllzuteiler
11. Verbrennungsgrost
12. Verbrennungsraum
13. Rostdurchfallreder
14. Stößelentschlacker
15. Primärluftansaugleitung mit Ventilator und Luvo
16. Dampfkessel
17. Flugascheaustag Kessel
18. Elektrofilter
19. Flugascheaustag E-Filter
20. DeNOx-Anlage
21. Economizer
22. Quench / Saurer Wäscher
23. Basischer Wäscher mit Aerosolabscheidung
24. Saugzugventilator
25. Schalldämpfer
26. Kamine (Nass- und Heissgas)
27. Notsaugzug-Ventilator
28. Schlackenband
29. Schlackenbunker
30. Schlackenkran
31. Turbine 1
32. NS- / MS-Schaltanlage
33. Turbine 2
34. Heizkondensator
35. Wärmespeicher

## Quantity distribution of residues in the WI process

Source: ITAD annual report 2013

Noise barriers in the Netherlands made of slag  
Source: CEWEP 2011

## Chosen Incineration Technology Derhachi Region

### Grate-firing incineration plant

Efficiency of incineration	97%
Concentration N <sub>2</sub> O in mg/Nm <sup>3</sup>	2
Flue gas volume in Nm <sup>3</sup> /t input	5,500
Auxiliary fuel	
- fuel oil in % of thermal input	2%
- natural gas in % of thermal input	0.5%

Example Combined heat and power extraction from waste incineration plant (KVA Basel)

### Version 1:

- Electrical net efficiency 10%
- Thermal net efficiency 35%

### Version 2:

- Electrical net efficiency 30%

22.06.2017 Thermal net efficiency 0%

## Anaerobic Digestion

### Wet mesophilic two-step digesters

#### Output streams

- impurities 5 mass-%
- wastewater 60 mass-%
- digestate 25 mass-%
- biogas 10 mass-%

#### Specific gas yield:

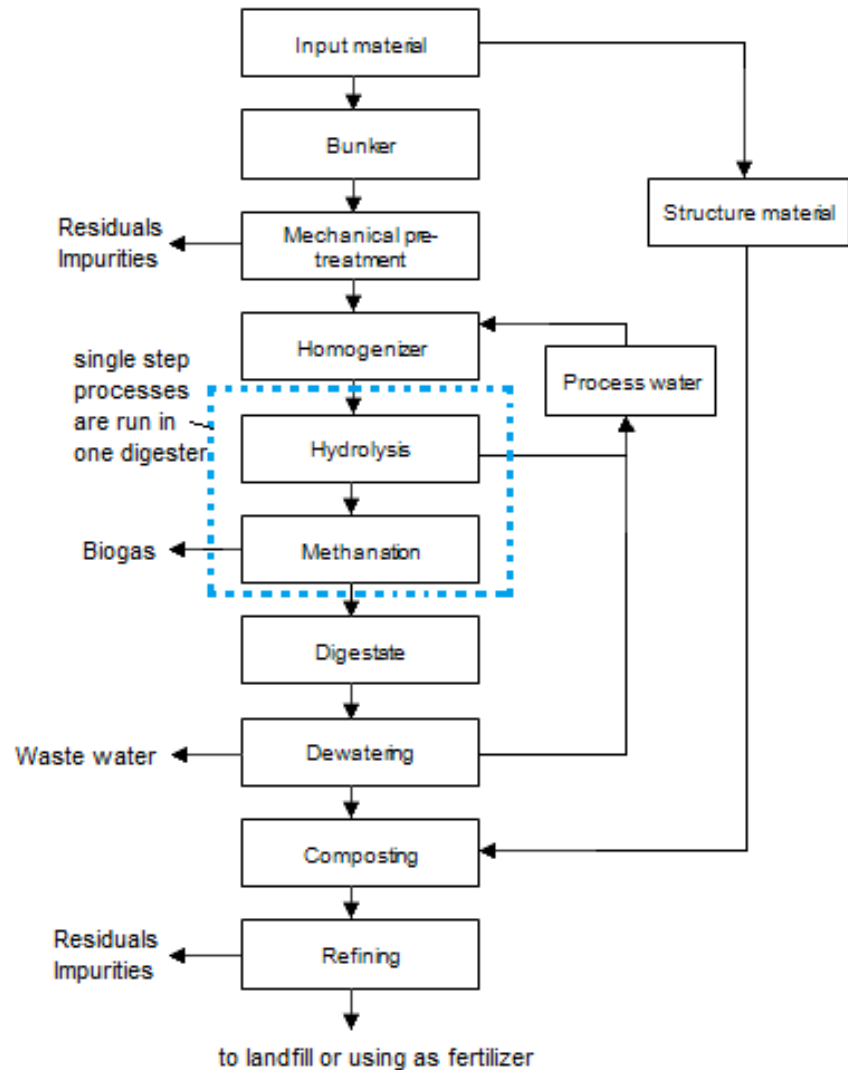

- Organic 500 Nm<sup>3</sup>/t VDM
- Wood 40 Nm<sup>3</sup>/t VDM

#### CHP

- electrical net efficiency 35%
- thermal net efficiency 12%

#### Own consumption

- electricity 50 kWh/t<sub>input</sub>
- heat 30 kWh/t<sub>input</sub>
- fuel oil/diesel 11 kWh/t<sub>input</sub>

## Costs

Most of the costs depend on the local markets

Not enough sufficient information about the real costs and the actual circumstances in the case study regions

Overview of the investment and operational costs for each treatment possible

### Investment costs

- property
- site search/expert opinions
- development costs
- buildings
- facility units
- site vehicles/truck scale

### Operational Costs

- staff costs
- electricity
- insurance
- service costs

Considerations of revenues

**Incineration plants have higher investment costs than MBT**

**Especially MBT on a landfill site with low technology can be realized with relative low investments**

## Conclusion

Establishing sanitary landfill should be the first step reducing environmental and climatic impacts

Implementation of low tech technology is recommended

Separation of biowaste leads to less greenhouse gas emissions from landfill

**»Wissen schafft Brücken.«**
